PREFACE

Ontario population data by county and municipality is available from the Census of Canada every five or ten years. Statistics Canada, in its statistical studies, estimates provincial population by age and sex for other than Census years and after each Census provides a set of revised estimates for the inter-censal period.

The increasing need for trend information on small areas by planners at all levels of government has led to the development in Ontario of a program of estimation of county population by age and sex on a census definition basis.

In December 1977, we published intercensal estimates by five-year age group and sex for counties and planning regions in a report entitled "Ontario Population Estimates by Planning Regions and Counties June 1972 to June 1976."

The following report updates the information by providing estimates for 1977 not only for the counties but for centres of 10,000 population and over. In addition, the 1976 Census data is provided in the report for reference purposes.

August 1978

PREFACE

Ontario population data by county and municipality is available from the Census of Canada every five or ten years. Statistics Canada, in its statistical studies, estimates provincial population by age and sex for other than Census years and after each Census provides a set of revised estimates for the inter-censal period.

The increasing need for trend information on small areas by planners at all levels of government has led to the development in Ontario of a program of estimation of county population by age and sex on a census definition basis from the Ontario Ministry of Revenue, enumeration data.

In September 1978, we published intercensal estimates by five-year age group and sex for counties and planning regions in a report entitled "Ontario Revised Population Estimates by Five-Year Age Group and Sex for Counties and by Planning Regions, 1971-1976". In July 1978 a report updating the 1976 Census information was published providing 1977 Estimates.

The following report updates the 1977 information by providing estimates for 1978 not only for the counties but for centres of 10,000 population and over.

PREFACE

Ontario population data by county and municipality is available from the Census of Canada every five or ten years. Statistics Canada, in its statistical studies, estimates provincial population by age and sex for other than Census years and after each Census provides a set of revised estimates for the intercensal period.

The increasing need for trend information on small areas by planners at all levels of government has led to the development in Ontario of a program of estimation of county population by age and sex on a census definition basis derived from enumeration data collected by the Ontario Ministry of Revenue.

In September 1978, we published intercensal estimates by five-year age group and sex for counties and planning regions in a report entitled "Ontario Revised Population Estimates by Five-Year Age Group and Sex for Counties and by Planning Regions, 1971-1976". Every summer a report updating the 1976 census information is published providing the most recent population estimates.

The following report provides estimates for 1979 for the counties and for centres of 10,000 population and over.

PREFACE

Ontario population data by county and municipality is available from the Census of Canada every five or ten years. Statistics Canada, in its statistical studies, estimates provincial population by age and sex for other than Census years and after each Census provides a set of revised estimates for the intercensal period.

The increasing need for trend information on small areas by planners at all levels of government has led to the development in Ontario of a program of estimation of county population by age and sex on a census definition basis derived from enumeration data collected by the Ontario Ministry of Revenue.

In September 1978, we published intercensal estimates by five-year age group and sex for counties and planning regions in a report entitled "Ontario Revised Population Estimates by Five-Year Age Group and Sex for Counties and by Planning Regions, 1971-1976". Every summer a report updating the 1976 census information is published providing the most recent population estimates.

The following report provides estimates for 1980 for the counties and for centres of 10,000 population and over.

Population Estimates

By Five Year Age Groups and Sex

[1982]

June 1, 1982

Ministry of
Treasury and
Economics

Hon. Larry Grossman, Q.C.
Treasurer
Tom Campbell
Deputy Treasurer

Statistical
Services
Branch

July 1983

PREFACE

This document contains estimates of the population by sex and five-year age groups as of June 1, 1982 for Ontario's regions and counties. It continues the series of intercensal estimates published annually (except for Census Years) by Statistical Services Branch.

These estimates are arrived at by the component method on the basis of the results of the preceding census, in this case the 1981 Census. They are **preliminary** and will be revised after the next Census.

The components of population change are estimated on the basis of birth and death information from The Ontario Registrar General, Driver's Change of Address data from the Ontario Ministry of Transportation and Communications, and immigration data from Employment and Immigration Canada.

Population estimates for centres (cities and towns) of 10,000 population and over will be published separately at a later date.

Any enquiries about these estimates should be directed to Dorothy Fetterly at 965-6613.
